

TDM V8.1 HOT FIX 1 RELEASE NOTES

- These Release Notes describe the new features in TDM release V8.1 HF1 and list bugs that have been fixed since the V8.1 release.
- Certification of this TDM release is based on:
- Fabric 7.2 HF1
- PostgreSQL 15

MAIN FEATURES AND IMPROVEMENTS

- Fixing of the TDMLUInit flow, which adds the TDM setup to the LU:
 - Fixing of the update of an LU with one table.
 - Fixing of the delete flows' creation for tables without a PK – setting the linked fields to the parent LU table as a key for the delete statement.
 - Fixing of the population flow's creation for the main source LU table - the duplicated setting of the Target Entity ID key has now been removed.
- CustomLogicSql flow changes - this flow is now used as a template that needs to be edited by the implementor:
 - The interface for the SQL query has been updated to be an empty link. The implementor can edit this flow and add the required interface.

This flow is no longer available by default for the TDM tasks; the implementor first needs to edit it, before adding it.
- TDM Portal fixes –
 - Removal of the 'Select a Predefined Entity List' selection method from the delete only task. This selection method can be selected only on Extract or Extract and Load tasks.
 - Fixing the use of the 'IN' and 'NOT IN' operators for a task with Parameters selection method:
 - Enabling the 'IN' and 'NOT IN' operators on all Combo parameters and free text parameters.
 - Fixing of the SQL query for free text parameters.
 - The Environment window has been fixed to enable setting only the 'Synthetic' System version on the Synthetic environment.
 - Entity Clone task – fixed the wording for the entity clone type options.
 - Task window - fixed the layout of the Reference and Task Variables tabs.
 - Fixing of the list of available Globals when setting either Task variables or Environment variables, thus preventing the user from setting the TDM Globals.
 - Fixing of the horizontal scrolling in the TDM Portal tabs.

TDM RELEASE NOTES

- Task execution reports – fixing of the Replace Sequence Summary Report tab population for a Load task that replaces the sequences in the target.
